

Senior AI Software Engineer

Full Time or Contract | AI | 100% Remote

Are you a high-performing developer who wants to build AI that talks to real people — every single day?

At DineLine AI, we're building cutting-edge conversational AI agents that handle thousands of live phone orders for restaurants every day. Our technology takes pickup and delivery orders, guides customers through menu choices, and even remembers preferences like "same as last time". Founded in 2024, the company is already commercialising its products and growing sales FAST.

This is real-world AI — live, fast-moving, and reshaping how restaurants operate.

Why Join DineLine AI?

You'll join a native AI company building agentic AI systems that listen, think, and act.

Our products are already being used by real restaurants, helping modernise a global food service industry worth over \$900 billion.

In this role, you will:

- Work with transformer models, real-time speech systems, and multi-agent orchestration
- Build and deploy production AI systems that handle live customer interactions
- Ship features used by real businesses within weeks, not months
- Be part of a smart, ambitious, fast-scaling team

We value curiosity, initiative, and the ability to learn quickly. If you're driven, capable, and excited by building practical AI, you'll do well here.

What We're Looking For

- 3+ years' experience in software development
- Strong experience with modern TypeScript-based application development
- Experience building AI-powered applications using APIs such as OpenAI, Anthropic, or similar
- Strong experience using Codex or comparable AI-assisted software development tools

- Solid problem-solving ability and strong systems thinking
- Tertiary qualifications in Computer Science, Mathematics, Engineering, or a related field
- Able to work independently and effectively in a remote work environment
- Based in Australia

Our Tech Stack

- AI / LLM: OpenAI API, function calling, real-time tooling
- Frontend: Angular, Tailwind CSS
- Backend: NestJS, Express
- CI/CD: GitHub Actions
- Monorepo: Nx

What You'll Get

- The opportunity to work at the forefront of applied AI
- Build an application that is on high demand
- Be part of a fast-growing AI Startup founded by seasoned entrepreneurs with an impressive track record
- Exposure to real-world deployment challenges in voice and conversational systems
- A fast-growing startup environment with meaningful ownership
- The chance to work alongside talented people building the future of AI voice technology

If you're ready to build practical, production-grade AI, we'd love to hear from you. Apply now.

Remuneration

Above market rates based on skills, experience and expertise.
